

The Geologic Storage Option

Larry Myer
WESTCARB Technical Director
California Energy Commission
(916) 551-1873; larry.myer@ucop.edu

*Edison Climate Workshop
March 28, 2006*

Topics

- Brief technology summary
- How is the CO₂ stored?
- Assessing storage capacity
- Cost
- Is geologic storage safe and secure?
- Need for monitoring
- Mitigation strategies
- The value of pilot studies
- What's next?

WEST COAST REGIONAL CARBON SEQUESTRATION PARTNERSHIP 2

Geologic Sequestration Involves Capture, Compression and Injection

WEST COAST REGIONAL CARBON SEQUESTRATION PARTNERSHIP 3

Geologic Storage Is Already Under Way

- Statoil injects 1×10^6 tons per year at Sleipner
- BP to inject 0.8×10^6 tons per year at In Salah

WEST COAST REGIONAL CARBON SEQUESTRATION PARTNERSHIP 4

Geologic Storage Mechanisms

- Physical, hydrodynamic, trapping
- Dissolution
- Phase trapping
- Mineralization
- Surface adsorption

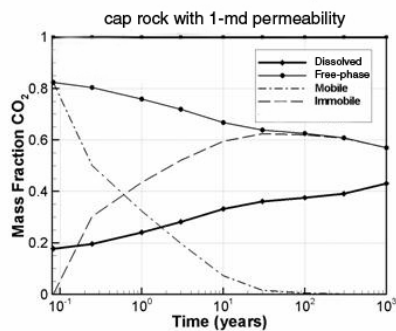

WEST COAST REGIONAL CARBON SEQUESTRATION PARTNERSHIP 5

Simulations Show Fate of Geologically Stored CO₂

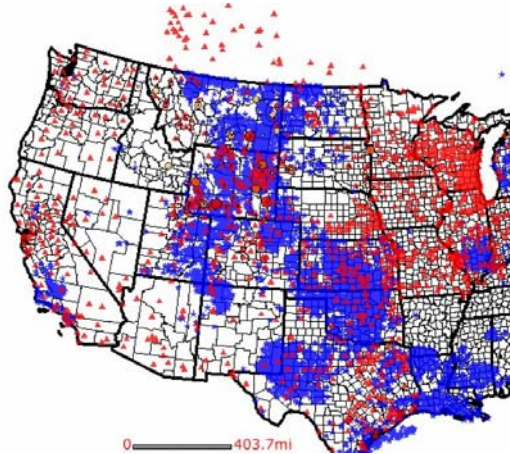

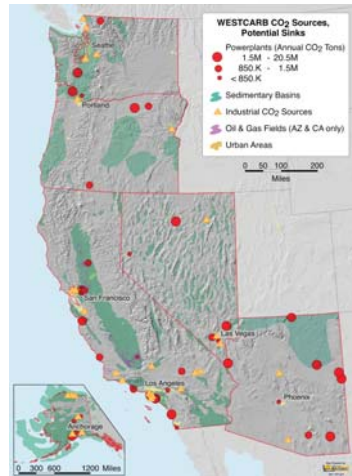

Results show fate of a plume of 900,000 tons of CO₂ injected beneath a poor quality cap rock (1-md permeability); S_g is the CO₂ saturation, where 1=100%; "mass fraction" means proportion of total, where 1=100%; mass of "mobile" plus "immobile" equals "free phase" CO₂

WEST COAST REGIONAL CARBON SEQUESTRATION PARTNERSHIP 5

Potential Geologic Storage Formations are Broadly Distributed in Many States

NATCARB database

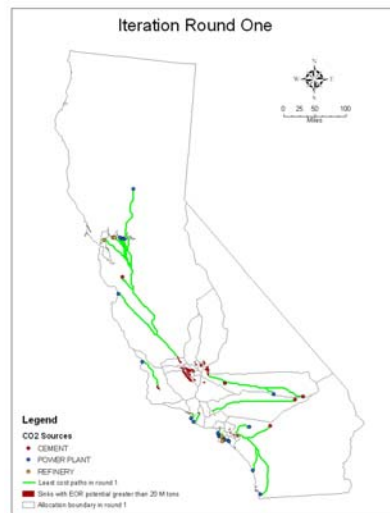

WEST COAST REGIONAL CARBON SEQUESTRATION PARTNERSHIP 7

Development of Supply Curves for Geologic Storage Improve Cost Estimates

- CO₂ source characterization
- Capture cost estimation
- CO₂ storage capacity estimation
- Transportation cost estimation
- Source-sink matching

Matching sources to sinks
(From H. Herzog, MIT)

WEST COAST REGIONAL CARBON SEQUESTRATION PARTNERSHIP 8

IPCC Report Provides Context for Discussion of Storage Risks

“With appropriate site selection informed by available subsurface information, a monitoring program to detect problems, a regulatory system, and the appropriate use of remediation methods to stop or control CO₂ releases if they arise, the local health, safety and environmental risks of geological storage would be comparable to risks of current activities such as natural gas storage, EOR, and deep underground disposal of acid gas” (IPCC, 2006)

WEST COAST REGIONAL CARBON SEQUESTRATION PARTNERSHIP 9

HSE Risks of Geologic Storage

- Impacts of unintended leakage
 - Health and safety of workers and general population
 - Environmental impacts
 - Unwanted intrusion into drinking water
- Earthquakes
- Unwanted intrusion of saline fluids

Tree kill at Mammoth Mountain, CA

WEST COAST REGIONAL CARBON SEQUESTRATION PARTNERSHIP 10

Many Lines of Evidence Indicate Storage Can Be Safe and Secure

- Natural analogues
 - Oil and gas
 - CO₂ formations
- Industrial analogues
 - Natural gas storage
 - CO₂ EOR
 - Liquid waste disposal
- Monitoring existing projects
 - Sleipner
 - Weyburn

Results of Review of Current Regulatory Framework in WESTCARB Region

- Regulatory agencies actively participated in process
- Comparative assessment of regulations for enhanced oil recovery, natural gas storage, and underground waste injection
- Various unresolved issues remain

Remediation Options are Available if Something Does Go Wrong

- Leaking wells

- Lakes

- Groundwater

WEST COAST REGIONAL CARBON SEQUESTRATION PARTNERSHIP 13

Why Monitor?

- Confirm storage efficiency and processes
- Ensure effective injection controls
- Detect plume location and leakage from storage formation
- Ensure worker and public safety
- Design and evaluate remediation efforts
- Detect and quantify surface leakage
- Provide assurance and accounting for monetary transactions
- Settle legal disputes

WEST COAST REGIONAL CARBON SEQUESTRATION PARTNERSHIP 14

A Substantial Portfolio of Monitoring Techniques are Available

- Seismic and electrical geophysics
- Well logging
- Hydrologic pressure and tracer measurements
- Geochemical sampling
- Remote sensing
- CO₂ sensors
- Surface flux measurements
- Estimated cost: ~\$0.20/ton CO₂

Pilots Provide Regional Knowledge Base Essential for Large Scale Implementation

- Pilots demonstrate best sequestration options, unique technologies and approaches, in region
- Pilots involve site-specific focus for
 - Testing technologies
 - Defining costs
 - Assessing leakage risks
 - Gauging public acceptance
 - Exercising regulatory requirements
 - Validating monitoring methods

westcarb.org WEST COAST REGIONAL CARBON SEQUESTRATION PARTNERSHIP 16

What's Next?

- Reconciling and revising capacity estimates
- Criteria for site selection
- Best practices for well construction and injection control
- Monitoring and verification protocols
- Mitigation strategies
- Field testing to build the experience needed for full scale deployment
